PROFESSIONAL SUMMARY

Technical Product Manager with 5+ years spanning software support, QA/analysis, and product ownership in mortgage lending technology. Skilled at translating complex operational and compliance requirements into shipped features by partnering directly with engineering, design, and business stakeholders. Proven track record of launching secure integrations that replace manual workflows and reduce operational risk.

WORK EXPERIENCE

Sr. Technical Product Manager — *Newfi Lending, Remote* | Feb 2022 – Present

- Managed the product roadmap for the Wholesale Lending Portal, Newfi's largest origination channel, driving feature enhancements and platform maintenance in partnership with a dedicated pod of engineers and a designer.
- Led end-to-end product development of Income IQ (IIQ), a portal-integrated connector linking brokers directly to Newfi's bank statement analysis engine, giving brokers a secure, self-service way to submit bank statement files and receive results with minimal turnaround time.
- Replaced a slower, less secure email-based file exchange process with a streamlined in-portal workflow, reducing manual handling and strengthening data security for sensitive borrower financial documents.
- Partnered with compliance and operations leadership to translate business and regulatory requirements into detailed PRDs and user stories, prioritizing and managing delivery through Agile ceremonies in Asana.
- Use SQL for data validation and Postman for API/integration testing to verify feature quality prior to release; use Lucidchart to document system architecture and process flows for engineering and stakeholder alignment.
- Leveraged Bolt to rapidly prototype UI concepts, accelerating design handoff and stakeholder feedback cycles.
- Developed and maintained a full-stack automation server, building several automated processes that eliminate manual operational work and improve team efficiency.

Software Analyst — *CU Direct, Irvine, CA* | Jan 2021 – Feb 2022

- Collaborated with software implementation, development, and QA teams to resolve key technical challenges across client-facing systems, including a new client-facing ticketing system.
- Served as first point of review for incoming issue tickets, triaging and escalating to technical teams to minimize resolution time, while running daily prioritization meetings with production clients.
- Analyzed recurring client feedback to identify functionality gaps and inform the product backlog; performed QA testing for all new features prior to release.
- Built and executed API GET/POST requests in Postman for vendor data validity checks; authored internal/external documentation including test processes and system function explanations.

Software Support Analyst — *MeridianLink Inc., Costa Mesa, CA* | Jul 2018 – Dec 2020

- Provided tier 1 technical support via phone, chat, and ticketing systems to 200+ clients, exceeding yearly team resolution metrics while delivering 98% of cases within SLA.
- Performed QA testing and debugging (SQL, JavaScript, C#) for system issues and new features; built custom data extraction reports requiring precise data mapping and custom C# functions.
- Applied XML, C#, and PDF design skills to code, deploy, and maintain system-generated compliance documents; collaborated with senior analysts, developers, and clients to improve knowledge base articles.
- Mentored and onboarded newly hired support analysts, reporting progress to management to ensure new hires met performance milestones; led a cross-department initiative to streamline the process for adding, correcting, and deploying compliance documents.

EDUCATION

A.S., Computer Information Systems — Focus in Programming and Mathematics

Mt. San Jacinto College, San Jacinto, CA

SKILLS

Product & Delivery: Roadmapping, PRDs & user stories, Agile/Scrum, backlog prioritization, stakeholder management

Technical: Python, SQL, Java, Object-Oriented Programming, Postman (API testing/integration), XML

Tools: Asana, Jira, Azure DevOps, Lucidchart, Bolt, Figma, Salesforce, Git.
